Dear Mr. Binnie,

ALPHA SOLWAY 3030V - FFP3 DISPOSABLE RESPIRATORS

I have been a Fit2Fit accredited face fit tester for many years and currently work as an independent commercial tester.

Over the years I have carried out literally thousands of face fit tests, both quantitative and qualitative across multiple industries and in different countries. This has brought me into contact with almost every type of RPE and mask fitting challenge.

Recently, I have been increasingly asked by several construction companies to fit test their workforces with FFP3 Disposable Respirators, due to the highlighted health hazards of occupational cancers such as Asbestosis, Mesothelioma and Silicosis.

Having performed countless fit tests with most of the brands and types of tight fitting RPE available on the market, I have concluded that the Alpha Solway 3030V provides the best fit test performance of any disposable respirator I have tested. I now only recommend the 3030V to my customers as I can be totally confident that it will provide a good seal.

Workers I have tested with the 3030V say it is very comfortable and easy to fit. In my opinion some of the masks design features such as the inner face seal, 4-point adjustable head straps, and pre-formed nose bridge, contribute to making it very quick and easy to achieve a good seal. Workers tested also say breathing resistance is minimal.

The Portacount results and pass rates provided by the Alpha Solway 3030V exceed those obtained by all other disposable respirators and the majority of re-usable half masks I have tested.

I would like to commend you on a great product and will continue to recommend the 3030V as a superb and easy to fit test disposable respirator solution to all my customers.

Yours Sincerely

Tim Hayward
Fit2Fit Accredited Face Fit Tester
